GRILLO Sodium Bisulphate

Because quality makes the difference

As the global market leader in the chemical industry, we are setting new standards with our sodium bisulphate. We are continuously working to reduce our ecological footprint. Our sodium bisulphate stands for the highest quality, produced in compliance with the strictest European standards. With GRILLO sodium bisulphate, you get a product that combines maximum performance with a sustainable approach.

Made in **Germany**

As a company producing in Germany, we place the highest value on quality and reliability. However, our production sites are subject to cost factors, some of which we cannot influence. These include comparatively high labor costs and energy costs. Despite these parameters, we do everything we can to offer you an appropriate price-performance ratio - without compromising on quality.

Your added value when purchasing our sodium bisulphate

Sustainable energy sources
In production, we use almost CO_2-free electricity and hydrogen as our main energy sources - an approach that sets us apart from many others.

Low carbon footprint
Thanks to our sustainable energy sources, our sodium bisulphate has a very low carbon footprint. This is documented by a PCF certificate and helps our customers to reduce their Scope 3 footprint.

Compliance with European standards
Our sodium bisulphate complies with DIN EN 16038 for swimming pools and therefore meets strict European legislation, which is often not guaranteed outside the EU.

Excellent service
GRILLO stands for high delivery reliability, fast availability and a personal contact - direct and uncomplicated.
